PROJECT REPORT

TITLE PAGE

Name : Himanshu Rajpoot

Registration Number : 25BCE10095

Branch : Computer Science And Engineering (CORE)

Year : 2025 - 2026

Course Code : CSE0001

Date of Submission : 31/03/2026

INTRODUCTION

This project focuses on developing digital literacy and awareness skills through practical tasks and real-world scenarios. The aim is to understand the importance of digital tools, online communication, cybersecurity, and responsible digital behavior. Throughout the project, various platforms and techniques were explored to enhance knowledge and hands-on experience. Each task contributed to building awareness about safe internet practices, effective communication, and digital productivity. This report summarizes the activities performed, tools used, and key learnings gained during the project.

TASK 1: PROJECT REPORT

For this task, I created my infographic using Canva, which is an easy-to-use design tool with various templates and elements. My infographic focuses on spreading awareness about digital literacy among students. It includes important topics such as the meaning of digital literacy, safe internet practices, and useful digital tools for students. I explained digital literacy as the ability to use digital technologies effectively and responsibly. I also highlighted safe practices like using strong passwords and avoiding suspicious links, along with tools like Google Docs, Excel, and Canva that help students in their daily academic work.

The design uses simple icons, clear headings, and a clean layout to make the information easy to understand and visually appealing. While creating the infographic, I found it interesting to explore different design elements and color combinations. However, maintaining a balance between visual appeal and proper content placement was slightly challenging. Overall, this task helped me improve my creativity and understanding of digital literacy concepts.

Additionally, this activity helped me realize the importance of digital literacy in today's world. It is essential for students to use technology wisely, stay safe online, and build a professional digital presence. Creating this infographic also improved my confidence in using design tools and presenting information in a clear and effective manner.

TASK 2: PROJECT REPORT

For my digital portfolio, I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for storing and managing code, where developers can showcase their projects and track their progress. LinkedIn is a professional networking platform that helps in building connections, presenting educational background, and exploring career opportunities. Kaggle is a platform focused on data science and machine learning, where users can work with datasets and improve their analytical skills.

Over the next four years, I plan to actively use GitHub to upload my academic projects and improve my coding skills. I will use LinkedIn to build a professional profile, connect with industry experts, and stay updated about internships and job opportunities. On Kaggle, I will practice data analysis and work on beginner-level projects to strengthen my knowledge in AI and machine learning. These platforms will help me build a strong digital presence and prepare for my future career.

Additionally, creating these profiles helped me understand the importance of maintaining a professional digital presence from an early stage. It also gave me confidence to explore new platforms and learn how they can support my academic and career growth. I believe that consistent use of these platforms will help me track my progress and improve my skills over time.

TASK 3: PROJECT REPORT

In this task, I explored both coding and collaboration platforms to improve my digital skills. I used HackerRank to solve a beginner-level programming problem, which helped me understand basic logic building and coding practices. It improved my confidence in writing simple programs and enhanced my problem-solving ability.

For collaboration, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions to test students' awareness about digital tools and online safety. I also linked the form with Google Sheets to automatically collect and organize responses. This helped me understand how data can be efficiently managed and analyzed using cloud-based tools.

Additionally, this task helped me improve my understanding of digital collaboration and real-world applications of technology. By creating and sharing the Google Form, I learned how information can be collected from multiple users efficiently and analyzed in an organized manner. It also highlighted the importance of digital awareness among students, especially in areas like online safety and responsible use of technology. These skills will not only support my academic projects but also prepare me for future professional environments where teamwork and digital tools are essential.

TASK 4: PROJECT REPORT

A college student once shared a joke about a group project on a social media platform, tagging their teammates for fun. The post, intended as harmless humor, was misinterpreted by some classmates and quickly spread across the college community. This led to misunderstandings, hurt feelings, and a formal complaint to the department, which could have affected the student's academic record and peer relationships

The situation highlights the consequences of careless digital communication. If the student had paused to consider the potential impact, used private messaging for jokes, or avoided tagging peers publicly, the conflict could have been prevented. Responsible digital communication involves thinking before posting, respecting others' feelings, and understanding that online content can be widely disseminated. Being mindful of these practices helps maintain professionalism and positive relationships in both academic and social environments

This scenario also emphasizes the importance of digital literacy education among students. Workshops or guidance sessions on responsible online behavior can equip students with the skills to manage their online presence effectively. Learning how to communicate professionally and safely online not only prevents conflicts but also builds a strong personal brand for future academic and career opportunities.

TASK 5: PROJECT REPORT

While researching cyberbullying and online fraud, I was surprised by how common and impactful these issues are, especially among college students. I realized that cybercrimes do not always involve advanced hacking; many attackers rely on simple psychological tricks like fear, urgency, or peer pressure to manipulate victims.

What stood out the most was how easily personal information shared online can be misused, and how quickly situations can escalate if not handled properly. I also learned that many victims hesitate to report incidents due to fear or embarrassment, which allows cybercriminals to continue targeting others.

What stood out the most was how easily personal information shared online can be misused, and how quickly situations can escalate if not handled properly. I also learned that many victims hesitate to report incidents due to fear or embarrassment, which allows cybercriminals to continue targeting others.

I will also make sure to verify suspicious messages, avoid clicking on unknown links, and use stronger security measures like two-factor authentication to protect my accounts.

CONCLUSION

This project provided a comprehensive understanding of digital literacy and its importance in today's world. Through various tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. The hands-on experience helped me develop practical skills such as creating content, managing digital platforms, and understanding cyber threats. I also became more aware of responsible online behavior and the need for data security. Overall, this project enhanced my technical knowledge, improved my confidence in using digital technologies, and prepared me to apply these skills in both academic and real-life situations.
